**ASX Release  
17 April 2007**

## **MANTLE MINING CORPORATION LIMITED**

### **Great Britain Deposit**

#### **Interim drill results continue positive indications**

Mantle Mining Corporation Limited (ASX: MNM), is pleased to advise that additional results from the initial round of drilling at the Company's Great Britain deposit have been received. The data includes the following encouraging intercepts:

GBRC 714 from 54 metres: 3 m @ 7.55g/t Au  
GBRC 715 from 51 metres: 3 m @ 2.87g/t Au  
GBRC 720 from 30 metres: 3 m @ 3.17g/t Au  
GBRC 723 from 47 metres: 1m @ 12.60g/t Au

Demand pressures on laboratories and the holiday breaks mean that the assays are taking longer than expected to be completed and received. It is now expected to be another two weeks before the final results are received and proper interpretation can commence. Follow-up drilling will then take place, as will commencement of a scoping study regarding the feasibility of mining the surficial ore at Great Britain.

Managing director, Stephen de Belle, said: "These are encouraging data. Taken in conjunction with the initial drill results announced on March 22, which all intersected mineralised material, they continue to suggest scope for an increase in resources. We are keen to get on with the follow-up drilling, and we are preparing ourselves for the full scoping study."

## **About Mantle Mining**

Mantle Mining successfully completed its IPO in November 2006 with a \$4m capital raising.

The company has:

- **Two Advanced Gold Projects in Queensland**
  - **Great Britain Deposit** (initial drill results announced 22 March 2007)
  - **Granite Castle Deposit**
- **Highly gold prospective ground in Eastern Victoria**
- **Highly prospective uranium ground in Queensland**

Mantle Mining has assembled a high quality suite of projects, largely to the west of the historic mining precincts of Charters Towers, where the Granite Castle and Great Britain deposits contain combined JORC standard inferred resources of 290,000 oz Au. Additionally, highly prospective ground covering a six kilometre gold anomalous corridor (with rock chip values to 42gm/t Au) along a major structure has been secured in Eastern Victoria.
